

API requirements

A Django REST API with the following features.

1. Model: Creators { Name, Bio, Twitter Link, YouTube Link, Instagram Link, Ethereum Address, Charity (boolean)} - this will be exposed at /creators (or /creators/get/) - done with PostgreSQL (probably will deploy to Railway.App).
2. A sign-in/sign-up via Twitter and Google - and an ability to add the data via a POST request (only for superuser/admin).
3. Search with URL parameters (/creators?name=John for example).
4. A model that stores transactions between users. Following fields-
 - i. Amount
 - ii. sentFrom
 - iii. sentTo
 - iv. Network
 - v. Currency
 - vi. timestamp
